CBAM Verification Body Accreditation Application – Progress Update

In response to the regulatory requirements of the European Union's Carbon Border Adjustment Mechanism (CBAM) and international developments in carbon management, our Center is actively undertaking the necessary procedures to apply for accreditation as a CBAM verification body. The scope of this accreditation application covers verification activities for iron or steel products under Activity Group VIII (Group VIII).

Our Center will continue to enhance its verification procedures, personnel qualifications, and technical competence in accordance with the relevant EU CBAM regulations and applicable international standards, with the aim of improving the quality of verification services and assisting enterprises in meeting the EU's carbon emissions reporting and verification requirements.

The CBAM verification body accreditation application is currently in progress. Relevant verification services will be provided only after accreditation has been formally granted and all applicable regulatory requirements have been fulfilled. Updates on the application progress and related service information will be announced on this website in due course.
